

1 DDMon — overview

This is an outline of the documentation of the artifact. Please find the referenced files and their PDF renders in the main artifact zip.

- README.md — General setup and instructions for local build. Contains the **Hardware Dependencies** section. Please consult this file first.
- EVALUATION.md — Provides the **Getting Started Guide** including instructions for “kick the tires” evaluation, followed by **Step-by-Step Instructions** on how to evaluate the artifact and **reproduce the results** from the companion paper.
- IMPLEMENTATION.md — Details of the DDMon implementation and how it connects to the theory and results in the companion paper.
- EXAMPLE.md — Showcase of how to use DDMon for monitoring applications based on the `gen_server` behaviour. This file serves as the **Reusability Guide**.
- BADGING.md — Contains overview on how we address requirements for each ACM artifact badge.
